

# Golf's Ultimate Fitting Experience

**An opportunity to live the life of a touring professional for three days:** Sharing TaylorMade's performance laboratory and practice facility used by touring professionals is an experience you will never forget. Playing golf at the Torrey Pines Golf Course, the home of the Buick Invitational and the 2008 US Open, or playing at the world famous, Arnold Palmer signature course, Aviara Country Club will also become memories of a lifetime

Fitting Experience  
in Beautiful  
San Diego, California

# What We Do

Using highly advanced computing and nine-camera motion capture technology used in creating the Tiger Woods video game and the Hollywood motion pictures Spiderman and King Kong, our PGA certified professionals provide a swing analysis for golfers of all abilities. Previously available only to PGA Tour Professionals, your custom fitting experience is conducted in a friendly relaxed atmosphere by our professional team.

During the fitting experience, reflective markers are placed on strategic points on your body, as well as on the shaft and head of the fitting club. Nine separate high speed, synchronized cameras capture the motion of the reflectors and instantaneously produce a three dimensional image of the subject. This image can be viewed in motion from any angle and is used to demonstrate what your swing is doing dynamically.

The resulting data is then used to recommend models and modifications of TaylorMade golf clubs to match individual swing characteristics. Club recommendations are immediately validated at the practice facility. In most cases, new custom-fit, factory-built clubs are delivered prior to your return home from this unique golf travel experience.

# What Does It Show

Some of the aspects which we measure and which you can view in **Three Dimensions 3-D®** are:

- Clubhead path
- Swing planes
- Speed planes
- Center of gravity
- Body line on shoulders, hips, knees, toes and spine
- Face angle
- Target line
- Ball position
- Head position
- X-Factor (relationship between shoulder turn and hip turn)
- Shaft and shoulder plane
- Wrist cocking angle
- Shaft line
- Shaft deflection
- Posture lines
- In/Out path of the club
- Up/down path of the club
- Hand speed
- Clubhead speed
- Effective loft of the club at impact
- Ball speed
- Launch angle
- Backspin
- Side spin
- Ball trajectory
- Computed distance of carry and roll
